Re: Industrial Wastes
Milford Rivet & Machine Co.
Hathoro Borough
Montgomery County, Pa.

Gentlemen:

By letter of June 1, 1972, addressed to Mr. Fabian, I advised your office that the waste treatment system for the above installation was to be revised, and the existing waste impoundments were to be eliminated and backfilled during the month of July.

While it is still our intention to eliminate and backfill the waste impoundments, the time schedule for the work will require some delay. The waste treatment equipment is now scheduled for delivery and installation during the month of August, and it will not be possible to eliminate the lagoons until the new system becomes operational.

Therefore it is now planned that the work of cleaning and backfill of the present impoundments will be done in September. It is the Owner's intention to use the firm and disposal facilities of Rollins-Purle, in Swedesboro, N.J.

Rollins-Purle will analyze the existing sludge deposits, and since they are principally residues of plating wastes from cyanide-bearing processes the sludge will be treated either by oxidation-reduction or by incineration.

Yours very truly,

William E. Graul
